REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

While it is known in the art to provide a cylindrical vessel having an internal partition defining an orbicular loop passage and an inner chamber, the loop passage having a first circumferential end and a second circumferential end, and means for removing liquid from the vessel (see, for example, US Pat No 4,323,367 to Ghosh); and it is known in the art to provide means of conducting liquid waste from a second circumferential end to an inner chamber (see, for example, US Pat No 2,430,519 to Mallory); in the examiner's opinion, the prior art fails to teach or fairly suggest combining means of communicating waste into the first circumferential end without introducing ambient air to the vessel and means of allowing solid waste to leave the second circumferential end without introducing ambient air to the vessel. The instant invention provides the advantage of anaerobically converting both high solid and low solid wastes to useful by-products by combining the advantages of high solids loop digesters and low solids high rate digesters into a single orbicular vessel. Due to its orbicular geometry, the apparatus provides a system with capable of reducing or eliminating clogging and associated maintenance problems typical of the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
